

Tablets

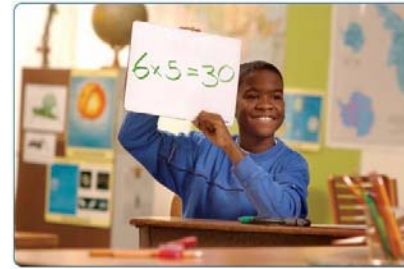

Tablets are dry erase boards smaller than 12"x18" mostly without frames for both handheld use and for attachment to flat surfaces.

- Excellent for Promotional items
- Used often as educational training aids
- Most of our production provides full 4 color at no cost increase over 1 color
- Fast turn around time
- Full technical and graphical support insures you get the product you really need
- Business use for meetings, planning & production
- Fulfillment can be arranged
- Use us to fill-in for delayed jobs from China

**No one has a wider range of dry erase tablets than ahutton.com.
We sell nationally and are the experts that can get you the correct item at the best price.
Use our expertise to make your project a success.**

Main Considerations and categories are!

- **Flexible**—can only be used on a solid surface such as a refrigerator. Small inexpensive magnets will hold it. Paper models have the lowest price. Magnet style (like big magnetic business cards) are also available.
- **Stiff**— Our stamped aluminum and 50 point chipboard are easily damaged by too much handling, so permanent mounting is recommended. The stiff boards have a very high perceived value for promotional use).
- **Rigid**— These units can be hand held so you can write on them in the air or on your knee. Steel will take the most abuse with the 100 point chipboard being the least tolerant. For wall mounting holes can be drilled so that they can be hung or magnets can be added. Price is higher but they will take a lot more wear and tear.
- **Magnetically receptive**—most tablets do not need to have magnets put on them but it can be done on our steel and specially made chipboard units see Tablets MR series on web
- **Printing vs Plain**— we sell tablets with no printing at all but most of what we sell has printing.
- **Color**— Screen printing (which is only used on a couple of our offerings) is mostly for one or 2 color jobs with minimal detail. Most of our products require quality full color and use paper printed digitally, by litho or dye sublimated where color is effectively the same cost as black and white.
- **Quantity**— Some processes are very quantity dependent where others are pretty consistent. Analyze your job and look at the process that will work with future production quantities not sample lots.
- **Resale**—Remember to tell us if you are reselling job 70% of our business is to resellers and we have special pricing for them.
- **Magnetic**— This option will stick to steel surfaces without any added magnets since the whole surface is a magnet. Most of ours are also dry erase but for special applications we can skip the dry erase.
- **Framed**—In this Tablet family the Tropical (PMB200) board has the only true frame and if it fits your need it's a great product.
- **Pen and Magnet Kits**—Available on some models
